Notes:

IDEC

- When a rubber boot is used, the operating force depends on the operating temperature.
- The operating force to shift the switch from position 2 to position 3 can be changed. For details, contact IDEC.

HE2B Double Three-position Enabling Switches

Terminal Arrangement (Bottom View)

With Rubber Boot

• 3-position switch (note): 2 contacts, terminal nos. between N01 – C1, N02 – C2

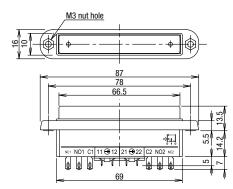

• Button return monitor switch: 0 to 2 contacts, terminal nos. between 11 - 12, 21 - 22

• Button depress monitor switch: 0 to 2 contacts, terminal nos. between 31 - 32, 41 - 42

Note: Use NO and C terminals for OFF \rightarrow ON \rightarrow OFF 3-position switch (NC terminal is not used).

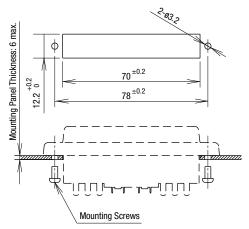

Dimensions

Without Rubber Boot

• M3 nuts are supplied with the HE2B enabling switch.

Mounting Hole Layout

• M3 nuts are installed in the rubber boot.

Mounting screw: Two M3 screws

• Length of mounting screw: Mounting panel thickness + 4 to 5 mm

Accessories

Replacement Rubber Boot

HE2B HE3B HE5B HE6B HE2G HE1G-L Actuator w/ Plastic Holder • The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)

- In order to avoid electric shock or fire, turn the power off before installation, removal, wiring, maintenance, or inspection of the enabling switch.
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- The ridge on the bottom of rubber boot serves as a seal, and waterproof characteristics are attained when the ridge is tightly pressed to the mounting panel. When the mounting panel is bent and the ridge cannot be pressed to the panel, add a reinforcing rib to secure the boot to the mounting panel.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.
- The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

Installation Instructions

 Provide sufficient strength to the mounting panel. Insufficient strength of the mounting panel or excessive operating force may damage the enabling switch, resulting in electric shock or fire.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

Rectangular operator part with ø16 mm mounting for easy installation. 2-contact 3-position enabling switches ideal for installing in small teach pendants.

• See website for details on approvals and standards.

<u> Safety</u> Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.

Instructions

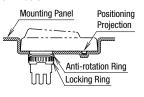

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.
- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

Installation Instructions

- If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.
- The rubber boot has a projection for positioning the enabling switch onto the mounting panel. To maintain waterproof characteristics of the switch, do not drill through the anti-rotation hole in the mounting panel. When not providing the hole, remove the anti-rotation projection from the rubber boot. When removing the projection, ensure not to make a hole in the rubber boot.
- Secure the flange part when tightening the locking ring so that the enabling switch does not rotate. When the enabling switch may rotate during operation, it is recommended to embed the switch in the mounting panel as shown below.

Wiring Instructions

- Applicable wire size: $0.5 \text{ mm}^2 \text{ maximum} \times 1 \text{ pc.}$
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

Explosion Proof Terminal Blocks	Conduit Port Size	M16 (cable gland is supplied with the grip style enabling switch housing)
		IP65 (with HE5B-M2P*)
Relays & Sockets	Degree of Protection	NEMA type 4X indoor use only (with HE5B-M2P*)
Circuit Protectors	Weight (approx.)	65g (grip style enabling switch housing only)

. The above specifications are for the grip style enabling switch housing only. For enabling switch, see the HE5B specifications on D-075

• The following switches can be installed on the grip style enabling switch housing to be used as hand-held switches.

• AB6M pushbuttons (IP65, except for AB6M-V)

AS6M selector switches (IP65)

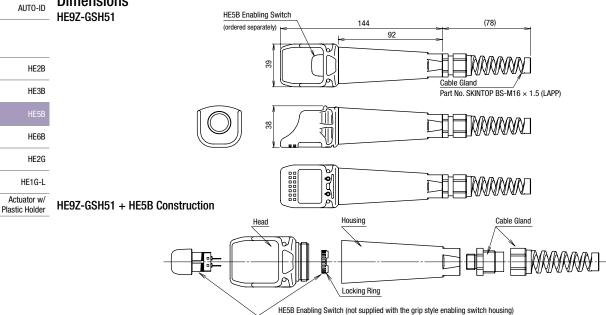

• AS6M key selector switches (IP65)

Dimensions

Notes:

- The HE9Z-GSH51 grip style enabling switch housing does not include the HE5B enabling switch. The enabling switch must be ordered separately.
- The HE5B enabling switch must be installed and wired to the HE9Z-GSH51 grip style enabling switch housing by the user. For information on wiring, see the instruction sheet supplied with the HE9Z-GSH51.

 Anti-rotation ring is not required when installing the HE5B enabling switch on the HE9Z-GSH51 grip style enabling switch housing. Use the locking ring only.

<u> Safety</u> Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.

- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended operation of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.
- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Operator strength is 250N. If the expected operating force exceeds 250N, use a separate actuator with a stoppper.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.
- Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

Installation Instructions

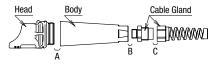

• If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.

HE9Z-GSH51 Grip Style Enabling Switch Housing

Recommended Tightening Torque

	Parts for tightening	Torque
Α	Head and body	0.8 to 1.2 N·m
В	Body and cable gland	2.7 ± 3.3 N·m
С	Cable gland	2.7 ± 3.3 N·m

• The recommended tightening torques of B and C are for the supplied cable gland. When using another cable gland, refer to the tightening torque of the cable gland used.

Wiring Instructions

- Applicable wire size: $0.5 \text{ mm}^2 \text{ maximum} \times 1 \text{ pc.}$
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

<u> Safety</u> Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not disable the safety function of the enabling switch by using tape, elastic band, or by disfiguring the rubber boot, otherwise the loss of enabling switch function may cause serious accidents.
- Perform a risk assessment in actual applications as strong force may be applied to the switch when depressed to position 3.
- Perform a risk assessment for the shape and structure of the part where the enabling switch is installed, to prevent unintended opera-

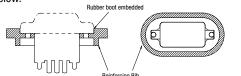

Instructions

Operating Instructions

- The enabling switch permits machine operation only while the enabling switch is manually operated for robot teaching or other purposes in hazardous areas. Make sure that the control system is designed to activate the machine only when the enabling switch is at position 2 (3mm) operating travel.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (e.g., safety relay module) (ISO 13849-1).
- Because two contacts are designed to operate independently, pressing the edge of a button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.
- When an enabling switch with rubber boot is mounted in a hermetically-sealed control box, a large change in internal air pressure may cause the rubber boot to inflate and deflate, affecting the performance of the enabling switch. Check periodically to make sure that the enabling switch operates correctly.
- If the mounting panel is deformed, waterproof characteristics of the enabling switch with rubber boot cannot be achieved. Keep sufficient strength on the mounting panel.
- The ridge on the bottom of rubber boot serves as a seal, and waterproof characteristics are attained when the ridge is tightly pressed to the mounting panel. When the mounting panel is bent and the ridge cannot be pressed to the panel, add a reinforcing rib to secure the boot to the mounting panel.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

tion of the enabling switch. For example, an enabling switch protruding from the teach pendant may result in an unintended operation of the enabling switch.

- Strong force may be applied to a 3-position enabling switch when pressed to position 3. Provide sufficient strength to the part where 3-position enabling switches will be installed.
- Use wires of the proper size to meet voltage and current requirements, and solder the wires correctly according to the wiring instruction described below. If soldering is incomplete, the wire may heat during operation, causing a fire hazard.
- Do not apply excessive force to the enabling switch.
- Follow the wiring instructions mentioned in the instruction manual.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.
- The edge of rubber boot may stick out if excessive force is applied on the rubber boot. When such event is anticipated, it is recommended to embed the rubber boot in the mounting panel as shown in the figure below.

• Using enabling switches without rubber boots in an environment where foreign particles or dust exist may lead to malfunction. Order an optional rubber boot or add extra protection.

Installation Instructions

 If the mounting panel is deformed, waterproof characteristics of the enabling switch cannot be achieved. Keep sufficient strength on the mounting panel.

Wiring Instructions

- Applicable wire size: 0.5 mm² maximum × 1 pc.
- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.

Compact, light-weight grip switch provides a comfortable hold

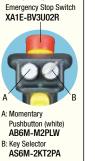

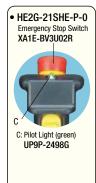

· See website for details on approvals and standards.

Select from a wide variety of models

Equipped with different control units for various use.

Compact design fits comfortably in the hand

The curved grip and small-size makes operation comfortable. The light-weight (approx. 140g, HE2G-21SH) and compact size is suitable for operators with small hands and for use in tight working environments.

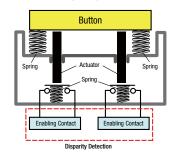

3-position switch with distinctive tactile feedback

Tactile clicking feedback allows easy recognition of switch operation when shifting from position 1 (contact OFF) to position 2 (contact ON).

Dual enabling contacts ensure a high level of safety

Dual enabling contacts with a separate actuator for each contact is IDEC's original design. This ensures a higher safety level. Disparity detection of category 4 (ISO 13849-1) can be achieved by using this switch with a safety relay module or a safety controller.

Actuators with plastic holders, applicable for HS5 series interlock switches, can be used with the HE2G

APEM Switches & Pilot Lights

HE1G-L

Actuator w/ Plastic Holder

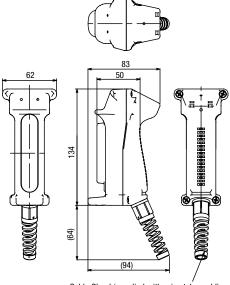

Operation Characteristics

• Terminals N01-C1/A1-B1, N02-C2/A3-B3 are outputs of the 3-position enabling switch.

• The above operation characteristics show when the center of the grip style enabling switch button is pressed. Because two contacts are designed to operate independently, pressing the edge of the button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.

Dimensions HE2G-21SH/HE2G-21SC

Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not hold the enabling switch to position 2 using tapes or strings Otherwise the loss of enabling switch function may cause serious accidents.
- Do not use with the grip switch installed on a machine.

- Use wires of the proper size to meet voltage and current requirements.
- Do not apply excessive force to the enabling switch.
- Make sure that dust, water and oil do not enter the grip switch during wiring.
- Be sure to choose cables according to the operating environment.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

Instructions

Operating Instructions

- This grip style three-position enabling switch is a device used for enabling a machine such as robots when teaching the machine in a hazardous area manually. Configure the enabling system so that the machine can operate when the switch is in position 2 and an separate start switch is required to initiate the system.
- To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (terminal No. N01-C1 and N02-C2) to a discrepancy detection circuit such as a safety relay module. (IS013849-1/ EN954-1)
- The base and the plastic part of rubber boot frame are made of glass-reinforced ABS/PBT. The rubber boot is made of silicone rubber or NBR/PVC polyblend. The screw is made of iron. When cleaning the grip style three-position enabling switch, use a detergent compatible with the materials.
- When adding momentary pushbutton switch and key selector switch, do not connect NO and NC contacts of a microswitch to different voltages or different power sources to prevent a dead short-circuit.
- When operating a additionally installed key selector switch, be sure to fully insert the key. Otherwise, failure may occur.
- The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

Wiring Instructions

- Solder the terminal at a temperature of 310 to 350°C within 3 seconds using a soldering iron. Sn-Ag-Cu type is recommended when using lead-free solder. Do not use flow or dip soldering.
- When soldering, take care not to touch the enabling switch with the soldering iron. Also ensure that no tensile force is applied to the terminal. Do not bend the terminal or apply excessive force to the terminal.
- Use non-corrosive liquid rosin as soldering flux.
- Because the terminal spacing is narrow, use protective tubes or heat shrinkable tubes to avoid burning of wire coating or short circuit.
- When using a stranded wire, make sure that adjoining terminals are not short-circuited
- with protruding core wires.
- Use copper Wire 60/75 degree C only. (UL508)
- The wiring has to be installed according to GS-ET-22, 4.2.6.

 \bullet 0.05 to 0.86mm² (AWG18 to 30): Check the compliance with receptacle and contact.

Tool: 1762846-1 (manual tool)

Note: When using stranded sires, make sure that loose wires do not cause short circuit. Also, do not older the terminals to prevent loose wires. Use copper wire of 60°C or 75°C temperature rating in order to comply with UL508. Observe the requirements of GS-ET-22: 2003, 4.2.6 for wiring.

HE1G-L Grip Style Three-position Enabling Switches

The distinctive tactile feedback makes it easy to know the current position of the switch. Light operating force ideal for long-hour operation

- Ergonomically-designed OFF-ON-OFF operation.
- . The switch does not turn ON when being released from position 3 (OFF
- when pressed) to position 1 (OFF when released) (IEC 60204-1, 9.2.5.8).
- Two contacts are provided so that even if one contact fails due to welding or short-circuit, the other contact can disable machine operation.
- Monitor switch is direct opening action.
- The distinctive tactile feedback when shifting to position 2 (enabling
- position) makes it easier to know where the enabling switch is currently positioned—position 1 (OFF), 2 (ON), or 3 (OFF).
- Lighter operating force on position 2 assures more comfortable, stressfree operation when operating long hours.
- Emergency stop switch and momentary pushbutton versions are available.
- Push-in terminal models can be selected.
- IP66 degree of protection (HE1G-L21SM)

HE1G-L LED Illumination

Package Quantity: 1

	Contact Conf	iguration	Rubber Boot	Wiring Style	Part No.
3-position Switch	Monitor Switch	Additional Pushbutton Switch		Wiring Style	Part NO.
		Without	Silicon Rubber / yellow (Note 1)		HE1G-L21SM
		Without	NBR/PVC Polyblend / gray (Note 2)		HE1G-L21SM-1N
	With (1NC)	Momentary Pushbutton Switch	Silicon Rubber / yellow		HE1G-L21SMB
2 contacts		(1NO: AB6M-M1PB)	NBR/PVC Polyblend / gray	Push-in terminal	HE1G-L21SMB-1N
2 contacts		Emergency Stop Switch	Silicon Rubber / yellow	Push-in terminal	HE1G-L20ME
	Without	(2NC: HA1E-V2S2R)	NBR/PVC Polyblend / gray		HE1G-L20ME-1N
	without	Momentary Pushbutton Switch	Silicon Rubber / yellow		HE1G-L20MB
		(2NO: AB6M-M2PB)	NBR/PVC Polyblend / gray		HE1G-L20MB-1N

Note 1: Silicon rubber: Can be used in general factories. Remains flexible at cold temperatures. Suitable to applications in a wide operating temperature range. Note 2: NBR/PVC polyblend: Oil-proof. Suitable for environments subjected to machine oil and painting robot where silicon rubber cannot be used.

Operating Characteristics

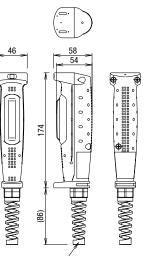

HE1G-L21SM, HE1G-L21SM-1N

- Terminals 1-2 and 3-4 are outputs of the 3-position enabling switch.
- Terminals 5-6/A3-B3 are outputs of the monitor switch.
- . The above operation characteristics show when the center of the grip style enabling switch button is pressed. Because two contacts are designed to operate independently, pressing the edge of the button turns on one contact earlier than the other contact, causing a delay in operation. To avoid this, always press the center of the button.

Safety Precautions

- The enabling switches have been designed for industrial purposes. Use for residential, commercial, or lighting purposes may cause unwanted electromagnetic disturbances in which case the user may be required to take adequate mitigation measures. (IEC60947-1, Clause 5.3)
- . Do not assemble or modify the enabling switches and do not disable the enabling function. Otherwise, failure of accidents may occur.
- When using the enabling switch in a safety related part of a control system, use the enabling switch properly in accordance with the safety standards and regulations of the actual machine, system, and application, of the country or region where the enabling switch is used. Also, perform a risk assessment before using the enabling switch.
- Do not hold the enabling switch to position 2 using tapes or strings Otherwise the loss of enabling switch function may cause serious accidents
- Do not use with the grip switch installed on a machine.
 - Instructions

Operating Instructions

- LED Illumination • This grip style three-position enabling switch is a device used for enabling a machine such as robots when teaching the machine in a Controllers hazardous area manually. Configure the enabling system so that the Operator machine can operate when the switch is in position 2 and an sepa-Interfaces rate start switch is required to initiate the system. Sensors
 - To achieve a high level of safety, connect the two contacts of the 3-position switch to a disparity detection circuit (terminal No. NO1-C1 and NO2-C2) to a discrepancy detection circuit such as a safety relay module. (IS013849-1/ EN954-1)
 - The base and the plastic part of rubber boot frame are made of glass-reinforced ABS/PBT. The rubber boot is made of silicone rubber or NBR/PVC polyblend. The screw is made of iron. When cleaning the grip style three-position enabling switch, use a detergent compatible with the materials.
 - The rubber boot may deteriorate depending on the operating environment and conditions. When the rubber boot is deformed or cracked, replace with new ones.

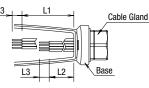

Wiring Instructions

Push-in Terminal Type

Wire Length inside the Grip Style Enabling Switch

	Terminal No. 1–4	Terminal No. 5–8
Wire stripping length L1, L2 (mm)	L1 = 35 mm	L2 = 30 mm
Wire stripping length L3 (mm)	L3 = 8 1	to 9 mm

Terminal No.

•	Use wires	of the p	roper	size to i	meet vo	oltage ar	nd curr	ent requ	ire-
	ments.								

- Do not apply excessive force to the enabling switch.
- Make sure that dust, water and oil do not enter the grip switch during wirina
- · Be sure to choose cables according to the operating environment.
- If multiple safety components are wired in series, the Performance Level to EN ISO 13849-1 will be reduced due to the restricted error detection under certain circumstance.
- The entire concept of the control system, in which the safety component is integrated, must be validated to EN ISO 13849-2.

Applicable Wire Size

<Direct wiring>

- 0.2 to 1.5 mm² (one wire per terminal)
- Note: When using stranded wire, make sure that adjoining terminals are not short-circuited by frayed wires. Also, do not solder the wires to avoid fraved wires.

<Ferrules>

Recommended ferrules (Phoenix Contact)

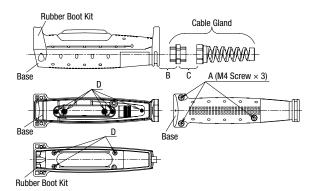

Part No.	Applicable Wire
S3TL-H025-12WJ	0.25mm ²
S3TL-H034-12WT	0.34mm ²
S3TL-H05-14WA	0.5mm ²
S3TL-H075-14WW	0.75mm ²

Crimping tool: PZ6 Roto L

Recommended Tightening Torque

	Parts for Tightening	Torque
A	Rubber boot and the base (M4 screw \times 3)	1.2 ± 0.1 N·m
В	Connector and grip style enabling switch	4.0 ± 0.3 N⋅m
С	Connector and connector	4.0 ± 0.3 N⋅m
D	Do not remove screws	—

The torque of screws B and C in the table above are values when the recommended connector is used. When using another connector, refer to the specifications of the connector used.

Actuator with Plastic Holder

HS5 series interlock switches detect the installation/removal of grip style enabling switches.

- The actuator with plastic holder for the HS5 series interlock switches can be installed onto the HE1G-L/HE2G grip style enabling switches easily using the two mounting screws supplied with the actuator.
- APEM Inserting the actuator on the grip style enabling switch into the switches & Pilot Lights • style enabling switch can be retained firmly in position.
 - Using with HS5E/HS5E-K interlock switches prevent unauthorized removal of grip style enabling switches.
- Stop Switches• Easy switching by removing/installing the grip style enabling
switches can be achieved by designing the circuit to initiate auto-
matic or manual operation when the interlock switch is installed or
removed, respectively.

uit .		
ors	Description	Part No.
es	Actuator with plastic holder for HE1G-L/HE2G	HE9Z-GP15

Note: The HE1G-L/HE2G grip style enabling switches and HS5 series interlock switches are ordered separately.

Specifications

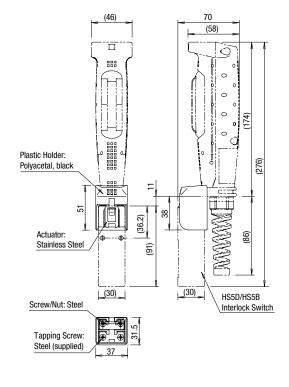

Applicable Model	HE1G-L/HE2G Grip Style Enabling Switch HS5D/HS5B/HS5E/HS5E-K Interlock Switch		
Mechanical Durability	10,000 operations		
Weight (approx.)	30g		

Note: Refer to the specifications of HE1G-L/HE2G grip style enabling switches and HS5D/HS5L/HS5E/HS5E-K interlock switches.

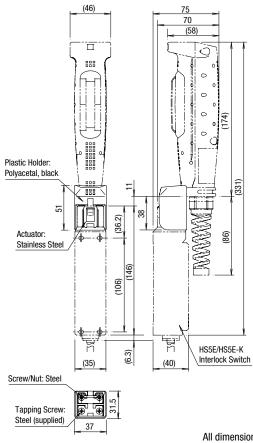

Dimensions

Mounting

 \odot The HE9Z-GP15 and the HE1G-L are installed as shown in the following figure.

② Secure the actuator using the attached two screws in the direction of the arrow as shown in the following figure.

 \bullet Using the attached screws (M4 self-tapping screw \times 2), secure the HE9Z-GP15 to the grip style enabling switch.

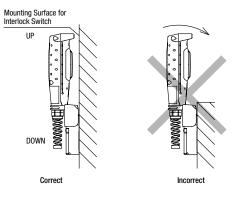

Recommended tightening torque: 1.0 ± 0.1 N·m Do not use excessive force to tighten the HE9Z-GP15 onto the switch, otherwise the mounting holes will become deformed and the HE9Z-GP15 cannot be secured. Prevent the screws from loosening by applying epoxy. (Recommended: LOCTITE 425, ThreeBond 1401)

Precautions for Installation

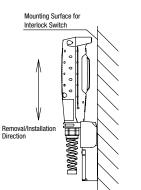

- When using the HE9Z-GP15 for safety-related equipment in a control system, refer to safety standards and regulations in each country and region to make sure of correct operation. Also, perform a risk assessment to ensure safety before starting operation of the machine.
- Read the instruction sheets for both the grip style enabling switch and interlock switch to be used.
- Insert the HE9Z-GP15 in the direction shown in the following figure only. Do not insert from any other direction. Also, do not use the slot plug attached to the interlock switch.

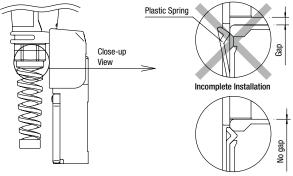

See below for vertical installation. Do not install in any other direction. Also, make sure that the mounting surface is provided for the entire area of the grip style enabling switch, so that the switch does not tilt as shown below. Otherwise the HE9Z-GP15 actuator will be deformed.

- Do not install the grip style enabling switch and the interlock switch in an area subjected to vibration. Excessive vibration may cause malfunction of the switch contacts of the grip style enabling switch. Also, exposure to vibration for a long period of time can cause scratching and deformation of plastic parts.
- When installing or removing the grip style enabling switch, do not use excessive force in any direction other than shown in the following figure. Otherwise the HE9Z-GP15 actuator can become deformed or damaged.

 Make sure that the HE9Z-GP15 actuator is inserted completely into the interlock switch. Avoid any foreign objects between the actuator and interlock switch as they may interfere with the plastic spring, resulting in possible damage to the actuator.

Complete Installation

 When manually unlocking the HS5L interlock switch attached to the grip style enabling switch, bend the spiral part of the connector slightly to be able to access the manual unlock key.

- Do not apply excessive shocks to the HE9Z-GP15 when attached to the interlock switch, otherwise the actuator may be removed from the interlock switch. Also excessive shocks may result in damage or failure of the interlock switch.
- When the plastic part of the HE9Z-GP15 or the actuator is damaged or deformed, stop using immediately.
- The HE9Z-GP15 is used for HE1G-L/HE2G grip style enabling switch and HS5D/HS5B/HS5L/HS5E-K interlock switches only. Do not use the HE9Z-GP15 for other products.
- Do not modify or disassemble the HE9Z-GP15.

Ordering Terms and Conditions

Thank you for using IDEC Products.

By purchasing products listed in our catalogs, datasheets, and the like (hereinafter referred to as "Catalogs") you agree to be bound by these terms and conditions. Please read and agree to the terms and conditions before placing your order.

1. Notes on contents of Catalogs

(1) Rated values, performance values, and specification values of IDEC products listed in this Catalog are values acquired under respective conditions in independent testing, and do not guarantee values gained in combined conditions.

Also, durability varies depending on the usage environment and usage conditions.

- (2) Reference data and reference values listed in Catalogs are for reference purposes only, and do not guarantee that the product will always operate appropriately in that range.
- (3) The specifications / appearance and accessories of IDEC products listed in Catalogs are subject to change or termination of sales without notice, for improvement or other reasons.
- (4) The content of Catalogs is subject to change without notice.

2. Note on applications

- (1) If using IDEC products in combination with other products, confirm the applicable laws / regulations and standards. Also, confirm that IDEC products are compatible with your systems, machines, devices, and the like by using under the actual conditions. IDEC shall bear no liability whatsoever regarding the compatibility with IDEC products.
- (2) The usage examples and application examples listed in Catalogs are for reference purposes only. Therefore, when introducing a product, confirm the performance and safety of the instruments, devices, and the like before use. Furthermore, regarding these examples, IDEC does not grant license to use IDEC products to you, and IDEC offers no warranties regarding the ownership of intellectual property rights or non-infringement upon the intellectual property rights of third parties.
- (3) When using IDEC products, be cautious when implementing the following.
 i. Use of IDEC products with sufficient allowance for rating and performance
 - ii. Safety design, including redundant design and malfunction prevention design that prevents other danger and damage even in the event that an IDEC product fails
 - iii. Wiring and installation that ensures the IDEC product used in your system, machine, device, or the like can perform and function according to its specifications
- (4) Continuing to use an IDEC product even after the performance has deteriorated can result in abnormal heat, smoke, fires, and the like due to insulation deterioration or the like. Perform periodic maintenance for IDEC products and the systems, machines, devices, and the like in which they are used.
- (5) IDEC products are developed and manufactured as general-purpose products for general industrial products. They are not intended for use in the following applications, and in the event that you use an IDEC product for these applications, unless otherwise agreed upon between you and IDEC, IDEC shall provide no guarantees whatsoever regarding IDEC products.
 - i. Use in applications that require a high degree of safety, including nuclear power control equipment, transportation equipment (railroads / airplanes / ships / vehicles / vehicle instruments, etc.), equipment for use in outer space, elevating equipment, medical instruments, safety devices, or any other equipment, instruments, or the like that could endanger life or human health
 - ii. Use in applications that require a high degree of reliability, such as provision systems for gas / waterworks / electricity, etc., systems that operate continuously for 24 hours, and settlement systems
 - iii. Use in applications where the product may be handled or used deviating from the specifications or conditions / environment listed in the Catalogs, such as equipment used outdoors or applications in environments subject to chemical pollution or electromagnetic interference If you would like to use IDEC products in the above applications, be sure to consult with an IDEC sales representative.

3. Inspections

We ask that you implement inspections for IDEC products you purchase without delay, as well as thoroughly keep in mind management/maintenance regarding handling of the product before and during the inspection.

4. Warranty

(1) Warranty period

The warranty period for IDEC products shall be one (1) year after purchase or delivery to the specified location. However, this shall not apply in cases where there is a different specification in the Catalogs or there is another agreement in place between you and IDEC.

(2) Warranty scope

Should a failure occur in an IDEC product during the above warranty period for reasons attributable to IDEC, then IDEC shall replace or repair that product, free of charge, at the purchase location / delivery location of the product, or an IDEC service base. However, failures caused by the following reasons shall be deemed outside the scope of this warranty.

- i. The product was handled or used deviating from the conditions / environment listed in the Catalogs
- ii. The failure was caused by reasons other than an IDEC product
- iii. Modification or repair was performed by a party other than IDEC
- iv. The failure was caused by a software program of a party other than IDEC
- v. The product was used outside of its original purpose
- vi. Replacement of maintenance parts, installation of accessories, or the like was not performed properly in accordance with the user's manual and Catalogs
- vii. The failure could not have been predicted with the scientific and technical standards at the time when the product was shipped from IDEC
- viii. The failure was due to other causes not attributable to IDEC (including cases of force majeure such as natural disasters and other disasters)

Furthermore, the warranty described here refers to a warranty on the IDEC product as a unit, and damages induced by the failure of an IDEC product are excluded from this warranty.

5. Limitation of liability

The warranty listed in this Agreement is the full and complete warranty for IDEC products, and IDEC shall bear no liability whatsoever regarding special damages, indirect damages, incidental damages, or passive damages that occurred due to an IDEC product.

6. Service scope

The prices of IDEC products do not include the cost of services, such as dispatching technicians. Therefore, separate fees are required in the following cases.

- Instructions for installation / adjustment and accompaniment at test operation (including creating application software and testing operation, etc.)
- (2) Maintenance inspections, adjustments, and repairs
- (3) Technical instructions and technical training
- (4) Product tests or inspections specified by you

The above content assumes transactions and usage within your region. Please consult with an IDEC sales representative regarding transactions and usage outside of your region. Also, IDEC provides no guarantees whatsoever regarding IDEC products sold outside your region.
