SLC30 series Combination Display Lights

Highly bright "Super LED" unit improves visibility and safety.

- Eight types of illumination faces to choose from. Compact combination display lights.
- Super bright Super LED.
- The fingersafe spring-up terminals reduce wiring time and prevent electrical shocks.
- The insulated jumper, when used on fingersafe spring-up terminals, eliminates the need of terminal cover.
- Legends can be engraved on the attached marking plate. One or two thin marking sheets (not attached) can also be installed (Type F only).
- Spot illumination available for easy recognition in bright environment (Type F only)
- UL and c-UL recognized, EN compliant.

Applicable Standards	Mark	File No. or Organization
UL508 CSA C22.2 No.14		UL/c-UL Recognized File No. E68961
EN60947-1 EN60947-5-1 (Note)		TÜV SÜD EU Low Voltage Directive

Note: Except for DC-DC converter and resistor types.

- A wide variety of illumination face sizes
- Type F: 30H x 30W mm (Basic size)
 - Type F spot illumination: 30H x 30W mm
 - Type C: 15H x 30W mm x 2 (Split-window)
 - Type H: 30H x 60W mm
 - Type H2: 30H x 60W (2-way split)
 - Type L: 30H x 90W mm
 - Type V: 60H x 30W mm
 - Type G: 60H x 60W mm
- Combined construction is available.

Type F Window Spot Illumination Kit

Frame (metal)
The frame cover and frame are molded in one piece for one-, two-, and three-window types.

Choice of LED or incandescent illumination

An Example of 15-window size

Spot illumination is available with type F only.

Type F Type F (spot illumination) (LED only) Type C (split-window) Type H (full) Type H2 (2-way illumination) Type L Type V Type G

The fingersafe, spring-up terminals reduce wiring time.

The integrated terminal cover and insulated jumpers prevent electric shocks.

Application Example of Jumpers

Marking films can be used for Type F only

Available up to 200 windows

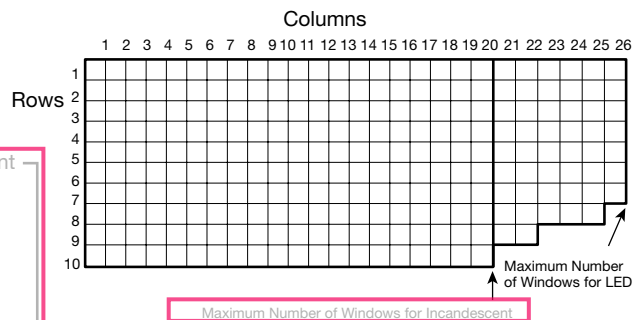

LED: 10 rows by 26 columns maximum

Incandescent: 10 rows by 20 columns maximum

(Type F - LED illumination: 6, 12, 24V AC/DC

Incandescent illumination: 6, 12, 18, 24V AC/DC

See page H-36 for details.

- For LED illuminated 110/220V AC type, up to 75 windows (Type F equivalent) can be mounted.
- For incandescent illuminated 110/220V AC type and for Type C, up to 50 windows (Type F equivalent) can be mounted.
- Lighting limitations should be considered in any application. For details see page 32.

How to Read the Table

- The number of windows equals rows multiplied by columns. For example, for 5 rows by 7 columns, the number of windows is 35, external dimensions are 162mm high by 22mm wide, and panel cut-out is 155mm high by 215mm wide.
- External dimensions are represented by A for rows and B for columns in boldface.
- Panel cut-out dimensions are shown in (), for height (C) and width (D). Panel cut-out tolerance is +1.0 to -0 mm (for one window: +0.6 to -0.4mm).

Panel Cut-out (SLC30)

Determine the panel thickness in consideration of the weight of display lights and wires (see page 26).

[Example]

- Total number of windows, dimensions, panel cut-out
- For Type C, H, L, V, and G, convert the numbers of rows and columns into Type F (basic size) equivalents.

- Type C — Type F equivalent: 2 split-windows consist of one window.

- Type H — Type F equivalent: 2 windows
Height: 1 row

Terminal Connection (LED Illuminated)

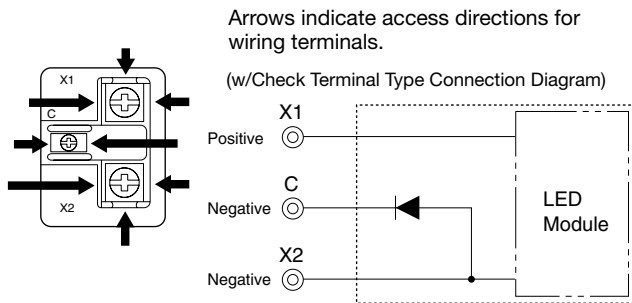

- For one-color full LED illuminated with check terminal, DC-DC converter, and resistor, Terminals X1 and X2 are positive and negative poles, respectively.

(Flasher Type Connection Diagram)

- For w/check terminal and two-color alternate units, terminal X1 is a positive pole; Terminals X2 and C (check terminal) are negative poles.

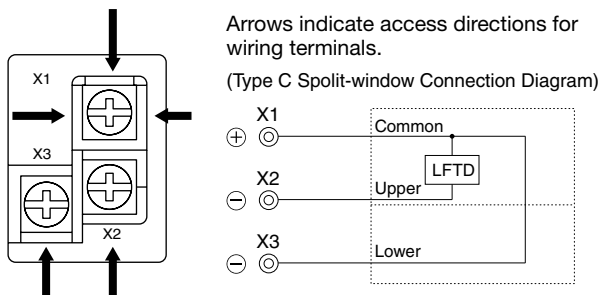

- Connection for two-color alternate is as follows.
Red (R) — Terminal X1: positive, Terminal C: negative
Green (G) — Terminal X1: positive, Terminal X2: negative

(Two-color alternate Type Connection Diagram)

- For the LED illuminated split-window (Type C), Terminal X1 (+) is a common terminal. Terminal X2 is a negative pole of upper illumination and Terminal X3 is a negative pole of lower illumination. (AC/DC, except for LFTD-5*)

Terminal Connection Using Jumpers

- For terminal connection of types F, H, L, V, and G (except Type C), jumpers can be used as shown below.

SLC30 Series

	Terminal X1	Terminal X2	Terminal C	
LED Illuminated (Note 2)	Fingersafe, Spring-up Terminal (Note 1)	SLCN-JP34 SLCN-JP35	SLCN-JP34 SLCN-JP35	—
	Others	SLC-JP30	SLC-JP33	SLC-JP32
Incandescent Illuminated	SLC-JP30	SLC-JP33	SLC-JP32	

Note 1: fingersafe, spring-up terminals are used in one-color full illuminated type (6, 12, 24V AC/DC, 100/110, 200/220V AC, 110V DC).

Note 2: No jumper is used on resistor type.

- For Type C, jumpers can be used on Terminal X1 only as shown below.

Direction	• When using Type C only • When using Type C and Two-color alternate
Vertical	SLC-JP33
Horizontal	SLC-JP30

Note: Jumpers cannot be used when using both Type C and fingersafe spring-up terminals.

[Examples of Using Jumpers]

When connecting two windows

When connecting three windows

When connecting four windows

Jumpers (SLCN-JP34/35) have an orientation. Ensure that jumpers are installed correctly.

Ordering Information

When ordering SLC Series Combination Display Lights, use the specification sheet provided on page 39.

Designation Procedure

1. Part No.: Refer to Part No. Development Configuration on page 13.
2. Quantity: Enter the required number of identical assemblies.

Counting of Windows

Count the number of windows in the equivalent of Type F (basic size).

Leaf Spring (for one-window type only)

Leaf spring for temporary fastening is not attached, and can be supplied free of charge upon request when ordering (Part No. SLD44KVP).

When ordering a combination of units with different operating voltages, specify Part No. as follows.

Specify the position of the units and each voltage on the specification sheet.

Ex. 4 When ordering a combination of units with different illumination colors, specify Part No. as follows.

Example: Full voltage LED illuminated 24V AC/DC, Red (6), Pure White (2)

Specify the position of the units and each color code on the specification sheet.

Ex. 5 When ordering a combination of units with different illumination colors for four windows of type C, specify Part No. as follows.

Example: Full voltage LED illuminated 24V AC/DC

Specify the position of the units and each color code on the specification sheet.

SLC40 Series Combination Display Lights

Highly bright "Super LED" unit improves visibility and safety.

- Eight types of illumination faces in 40mm size.
- Extensible window ensures high visibility when installed at high places (except C, L, G).
- Super bright Super LED.
- The fingersafe spring-up terminals save wiring time and prevent electrical shocks.
- The insulated jumper, when used on fingersafe spring-up terminals, eliminates the need of terminal cover.
- Legends can be engraved on the attached marking plate. One or two thin marking sheets (not attached) can also be installed (Type F only).
- Spot illumination available for easy recognition in bright environment (Type F only).
- UL and c-UL recognized, EN compliant (EN60947-5-1).

Applicable Standards	Mark	File No. or Organization
UL508 CSA C22.2 No. 14		UL/c-UL Recognized File No. E68961
EN60947-1 EN60947-5-1 (Note)		TÜV SÜD EU Low Voltage Directive

Note: Except for DC-DC converter and resistor types.

- A wide variety of illumination face sizes
- Type F: 40H × 40W mm (Basic size)
 - Type F spot illumination: 40H × 40W mm
 - Type C: 20H × 40W mm × 2 (Split-window type)
 - Type H: 40H × 80W mm
 - Type L: 40H × 120W mm
 - Type V: 80H × 40W mm
 - Type G: 80H × 80W mm
- Combined construction is available.

Type F Window Spot Illumination Kit

Frame (metal)
The frame cover and frame are integrated and molded of resin for Type F, one-window type.

Choice of LED or incandescent illumination

An Example of 12-window size

Spot illumination is available with type F only.

Extensible windows
Easy to recognize at high places (except Type C, L, and G)

The Fingersafe Spring-up terminals reduce wiring time. The integrated terminal cover and insulated jumpers prevent electric shocks.

Application Example of Jumpers

Split-window reduces installation space.

Available up to 126 windows
LED: 7 rows by 24 columns
LED illumination: 24V AC/DC
See page H-36 for details.

- For LED illuminated 110/220V AC type, up to 60 windows (Type F equivalent) can be mounted.
- For incandescent illuminated 110/220V AC type, up to 50 windows (Type F equivalent) can be mounted. For Type C, up to 105 windows (Type F equivalent) can be mounted.
- Lighting limitations should be considered in any applications. For details, see page 32.

How to Read the Table

- The number of windows equals rows multiplied by columns. For example, for 5 rows by 7 columns, the number of windows is 35, external dimensions are 216mm high by 296mm wide, and panel cut-out is 205mm high by 285mm wide.
- External dimensions are represented by A for rows and B for columns in boldface.
- Panel cut-out dimensions are shown in (), for height (C) and width (D). Panel cut-out tolerance is +1.0 to -0 mm (for one window: +0.6 to -0.4mm).

Panel Cut-out (SLC40)

Determine the panel thickness in consideration of the weight of display lights and wires (see page 26).

4. Total number of windows, dimensions, panel cut-out

- For Type C, H, L, V, and G, convert the numbers of rows and columns into Type F (basic size) equivalents.

- Type C — Type F equivalent: 2 split-windows consist of one window.

- Type H — Type F equivalent: 2 windows

Height: 1 row
Width: 2 columns

- Type V — Type F equivalent: 2 windows.

Height: 2 rows
Width: 1 column

- Type L — Type F equivalent: 3 windows

Height: 1 row
Width: 3 columns

- Type G — Type F equivalent: 4 windows

Height: 2 rows
Width: 2 columns

- The combination example at left consists of 3 rows by 6 columns.

- The above table shows: No. of windows: 18
Dimensions: 136H x 256W mm
Panel cut-out: 125H x 245W mm

Terminal Connection (LED Illuminated)

- For check terminal, DC-DC converter, and resistor, Terminals X1 and X2 are positive and negative poles, respectively.

Arrows indicate access direction for wiring terminals.

(Flasher Connection Diagram)

- For w/check terminal and two-color alternate units, Terminal X1 is a positive pole; Terminals X2 and C (check terminal) are negative poles. For two-color alternate, Terminal X1 is common.

- Connection for Two-color alternate is as follows. Terminal X1 (+) is common (AC/DC). Red (R): Terminal C, Green (G): Terminal X2

(Two-color alternate Connection Diagram)

- For the LED illuminated split-window (Type C), Terminal X1 (+) is a common terminal. Terminal X2 is for upper illumination and Terminal X3 is for lower illumination (AC/DC).

Arrows indicate access direction for wiring terminals.

Terminal Connection Using Jumpers

- For terminal connection of types F, H, L, V, and G (except Type C) using jumpers, jumpers can be used as shown below.

SLC40 Series

		Terminal X1	Terminal X2	Terminal C
LED Illuminated (Note 2)	Fingersafe, Spring-up Terminal (Note 1)	SLCN-JP44 SLCN-JP45	SLCN-JP44 SLCN-JP45	—
	Others	SLC-JP40	SLC-JP41	SLC-JP42
Incandescent Illuminated		SLC-JP40	SLC-JP41	SLC-JP42

Note 1: Fingersafe, spring-up terminals are used in one-color full illuminated (12, 24V AC/DC, 100/110, 200/220V AC, 110V DC).

Note 2: No jumper is used on resistor type.

- For Type C, jumpers can be used on Terminal X1 only as shown below.

Direction	• When using Type C only • When using Type C and Two-color alternate
Vertical	SLC-JP40
Horizontal	SLC-JP41

Note: Jumpers cannot be used when using Type C and fingersafe spring-up terminals.

Terminal Connection (Incandescent Illuminated)

- For incandescent illuminated dual-lamp, terminal X1 is a common terminal. Terminals X2 and X3 are connected with jumpers.
- The incandescent illuminated check terminal is for DC voltage only. Terminal X1 is a positive pole, and terminal X2 is a negative pole. Check terminal is a positive pole.
- Wiring direction for incandescent illuminated check terminals is the same as that of LED illuminated type.

[Examples of Using Jumpers]

When using two windows

When using three windows

When using four windows

Jumpers (SLCN-JP44/45) have an orientation. Ensure that jumpers are installed correctly.

Ordering Information

When ordering SLC Series Combination Display Lights, use the specification sheet provided on page 39.

Designation Procedure

1. Part No.: Refer to Part No. Development on page 24.
2. Quantity: Enter the required number of identical assemblies.

Counting of Windows

Count the number of windows in the equivalent of Type F (basic size).

Leaf Springs

Leaf spring for temporary fastening is not attached, and can be supplied free of charge upon request when ordering (Part No. SLD40KVP).

SLC30/40 series Combination Display Lights Instructions

Safety Precautions

- Turn off the power to the SLC units before installation, removal, wiring, maintenance, or inspection. Before removing the LED units or incandescent lamps, make sure that power is turned off. Failure to turn off the power may cause an electrical shock, create fire hazards, or damage of LED units or incandescent lamps. Do not use the SLC units without the lens, otherwise ingress of foreign objects may cause short circuit, and LED units may be damaged resulting in the deterioration of LED brightness or no lighting.
- When lighting the SLC units continuously, observe the conditions described below. If the limits are exceeded, the SLC units may heat up and create fire hazards or damage the SLC units.
- To avoid burning your hand, use the lamp holder tool when replacing incandescent lamps.
- For wiring, use wires of a proper size to meet the voltage and current requirements and tighten the terminal screws to the tightening torque shown below. Loose terminal screws may cause excessive heating, resulting in fire hazards.
- Do not install or operate the SLC units where the SLC units are subjected to direct sunlight. Excessive heating may create fire hazards or damage the SLC units.
- When replacing LED units, LED lamps, or incandescent lamps, use IDEC products.

Operating Instructions

Notes for Continuous Lighting

Up to 10 SLC units (Type F equivalent) can be lit continuously. When more units are mounted, consider the following restrictions.

LED illuminated full voltage

Incandescent illuminated full voltage

- Do not light more than 40% of the SLC units continuously, and light the units in a checker pattern.
- When more than 40% of the units are lit continuously, limit the lighting duration to 40 minutes. Before lighting the units again, ensure that all units have cooled down.
- When using 2-color alternate units, do not light the two colors simultaneously.

LED/Incandescent illuminated

Transformer and DC-DC converter

- Light the units in a flashing or checker pattern.

When using the SLC units in other conditions, contact IDEC.

Notes for Panel Mounting

- When mounting the SLC units on a panel, determine the panel thickness taking the weights of the SLC units and wires into consideration.

Tightening Torque for Terminal Screws

- For wiring, use wires of a proper size to meet the voltage and current requirements and tighten the terminal screws to the tightening torque shown below.

Terminal Screw	Tightening Torque
M3	0.6 to 1.0
M3.5	1.0 to 1.3 N·m
M4	1.4 to 2.0 N·m

<Storage and Handling>

- Do not use the SLC where it is subjected to condensation caused by extreme temperature change.
- Do not use chemicals such as alcohol that degrade the property of acrylic.

<Operating Instructions>

- The illumination color may change depending on the decreasing brightness of LED, along with the period of use.
- The SLC can be used indoors only. Do not use outdoors.

SLC30/40 Series Combination Display Lights Instructions

Operating Instructions

When Using Blue and Green LED Units

When replacing LED units, avoid ESD to the LED pins, otherwise the internal LED elements may become damaged.

Precautions for Noise

When using the SLC units in an environment where the SLC is subjected to noise, connect a noise suppressor across terminals X1 and X2 as shown below.

Notes for Using LED Units

Countermeasures against dim lighting

The SLC units contain a provision against dim lighting due to leakage current. If the LED unit appears to be dimly lit due to induced current from nearby AC lines, take appropriate countermeasures as described below.

[Sample Circuit]

[Countermeasure]

As shown in the diagram above, connect an RC circuit in parallel with the transformer LED unit. For the values of the resistor and capacitor, see the following table.

	Operating Voltage	Capacitor C (μF)	Resistor R

Note 5: Black marking plate has black coating. Engrave a reverse legend on the black-coated surface.

SLC30/40 Series Combination Display Lights Instructions

Type F Spot Illumination

Spot illumination LED unit and spot illumination kit are used.

Marking on Films

In addition to white color screens or clear marking plates, legends can be engraved on thin marking films on Type F windows. Two sheets of 0.1-mm-thick films or one sheet of 0.2-mm-thick films is applicable. Marking films are not supplied with the SLC units and must be prepared by the user.

Dimensions

SLC30N: 27 × 27 mm
SLC40N: 35.8 × 35.8 mm

Film Material

Polyester is recommended.

Placement of Marking Film

When using a marking film, place the matte surfaces of the marking plate and color screen in the same direction to make a room of 0.2 mm for the marking film (matte surfaces are not facing each other). When not using a marking film, face the matte surfaces of marking plate and color screen each other.

SLC30/40 series Combination Display Lights Instructions

Operating Instructions

Removing the Windows

SLC30 Series

To remove the display window, insert the tip of a flat screwdriver into the slot on the bottom of the lens frame, and press down lightly on the screwdriver as shown.

For types G and V, do not put excessive force to remove one latch while pressing the other latch on the opposite side.

SLC40 Series (Extensible Windows)

The extensible window, featured on all SLC40 series units except Types C, G, and L, can be removed simply by pulling the upper portion out of the housing. For Types C, G, and L, insert the tip of a flat screwdriver into the slot on the bottom of the lens frame, and press up lightly.

When installing Type C windows, face the retaining latch with TOP marking upward.

All windows are shipped with the window retracted. After the windows are installed in a panel, they can be extended as required starting from the lowest row to the top row. Beware of the orientation when installing the units. When transporting the units, hold all windows in the retracted position.

Replacing Lens, Marking Plate, and Color Screen

[Removal]

The lens has retaining projections (one or two each on right and left sides). To remove the lens, marking plate, and color screen from the lens frame, push open the lens frame with both hands as shown.

The lens can also be removed by inserting a screwdriver into one of the sides with recesses. Since the lens has an orientation due to projections, be sure to insert the screwdriver in the direction as shown.

Note: Take care not to damage or scratch the lens surface.

Retaining Projections Location

Series	Type F, G	Type C	Type H	Type L	Type V
SLC30 Series					
SLC40 Series (Extensible Windows)					

[Installation]

Install the color screen and marking plate into the lens frame.

To install the lens, insert its retaining projections into the recesses inside the lens frame, and press the lens on the other side into the lens frame.

Replacing the LED Unit

Ensure that power to the display lights has been turned off before removing the LED unit.

[Removal]

Use the LED unit removal tool (MT-101) to pull out the LED unit. For SLC30 units, pinch the top and bottom sides of the unit. For SLC40 units, pinch the right and left sides of the unit.

Note: When removing the LED unit from the housing, pull it out straight without pressing on the LED unit terminals.

[Installation]

The LED unit has an orientation. To install the LED unit, place the metal pins on the LED unit to fit into the receptacles in the housing, and insert the LED unit.

LED Unit Color Identification

Each LED unit has part no. and identification mark stamped.

Color	Code	Mark	Appearance	
			SLC30	SLC40
Red	R	● Red dot		
Green	G	● Green dot		
Amber	A	● Amber dot		
Blue	S	● Blue dot

			SLC30	SLC40
Yellow	Y	P (Note)		
White	W	W		
Pure White	PW	P		
Red/ Green	RG	—		

Note: Yellow (Y) LED unit uses a pure white LED unit with a yellow filter on the LED.

Replacing LED Lamps

SLC30, Type C

[Removal]

Push lamp holder tool OR-44 into the LED lamp kit, and push and turn clockwise to remove the lamp from the lamp holder.

[Installation]

Insert the lamp into the lamp holder completely (lamps can be installed easily by using the handle part of lamp holder tool).

Insert the lamp holder tool into the lamp holder.

Align the insertion guides of the lamp holder with the grooves in the SLC unit. Push the lamp lightly and turn clockwise to install.

SLC40, Type C

Lamps can be replaced easily by using the lamp holder tool OR-55. When removing the lamp, reflector does not have to be removed.

Installation on Panel

Insert the units into a panel cut-out from the front, and install the mounting clips supplied with the units from the back as shown below. Apply loctite on the screws to prevent loosening. The number of mounting screws varies with the number of windows. Tighten the screws to a torque of 0.39 N·m to 0.49 N·m.

SLC30 Series Combination Display with Control Units

Combination of display lights and control units reduce labor of switch installation and minimizes installation space.

Switch for lamp test, external switch for system display can be integrated into the frame of combination display lights.

- Various control units can be installed in the window frame, with or without SLC units.
- Panel space can be reduced.
- Labor and time to install switches can be reduced.
- Flexibility of panel design is maximized.
- Up to 30 windows (3 rows × 10 columns) can be used.

Combination Display Lights

Ordering Information

- When ordering, complete the Specification Sheet on page 39.
- Control units (SLC30-LW) can be mounted on the bottom row only.
- Jumpers (SLCN-JP34/-JP35) are used between combination display lights only. Jumpers can not be used between control units, or between control units and combination display lights.
- See page 27 to 29 for accessories.
- Minimum unit size is 2 × 1 windows.

Safety Precautions

See page 32.

Operating Instructions

- When using the insulation terminal cover (LW-VL2M) for the control units
 - Install the terminal cover on the SLC units before wiring. Terminal covers cannot be installed after wiring.
 - Ring crimping terminals cannot be installed when terminal covers are used. Use spade terminals or wire directly.
- Do not remove the operator part of control units from the housing. Otherwise contacts may malfunction.
- On key selector switches, do not attempt to remove the key at any key retained position with excessive force (more than approx. 70N). Otherwise the operator part detaches from the housing, causing the contacts to malfunction.
- Use a lamp holder tool (OR-55) when replacing lamps for control units.
- For wiring, use wires of a proper size to meet the voltage and current requirements. Tighten the M3.5 terminal screws to a tightening torque shown below.

Terminal Screw	Recommended Tightening Torque
M3	0.6 to 1.0 N·m
M3.5	1.0 to 1.3 N·m

- Up to 10 SLC units (Type F equivalent) can be lit continuously. When more units are mounted, consider the following restrictions.
 - Do not light more than 40% of the SLC units continuously, and light the units in a checker pattern.
 - When more than 40% of the units are lit continuously, limit the lighting duration to 40 minutes. Before lighting the units again, ensure that all units have cooled down.
- For other operating instructions of display lights, see the relevant pages of SLC30/40 catalog.
- For other operating instructions of control units, see the relevant pages of ø22 LW control unit catalog.
